v3 changes: all five pedals share one canonical generic enclosure (dark box, cream name plate, dark knobs with cream indicator, white value pill, red LED, footswitch). Only the controls inside vary — rotary knobs, toggle pills, or selector pills as the pedal requires. No photos, no per-brand styling. Wah uses the same enclosure with a treadle hint above its two toggles. Amps unchanged from v2. **Knob convention:** pedal knobs sweep 7 o'clock → 5 o'clock (300° clock-face); amp knobs use 0–10 numeric. Cream indicator line shows dial position; tick marks at min/max.
